

CLAIMS:

1. Multiphase LC oscillator comprising N units whereby N is at least 2, and each unit performs a phase shift of $180^\circ/N$ of an incoming signal, whereby each unit comprises a V/I converter part with a phase shift $180^\circ/N$ and an LC oscillation part, and the multiphase LC oscillator supplies at least two outputs signal with a phase difference.

5

2. Multiphase LC oscillator as claimed in claim 1, characterized in that each unit comprises control means to adjust the phase shift to obtain the required phase shift of $180^\circ/N$.

3. Multiphase LC oscillator as claimed in claim 2, characterized in that a V/I converter of the unit comprises amplifiers in series with a compensation amplifier parallel.

10

4. V/I converter for use in a multiphase LC oscillator according to claim 1, characterized in that V/I converter comprises compensation means to compensate for a phase shift.

15

5. Method to obtain multiphase signals with phase differences $180^\circ/N$ whereby N is at least 2, having the steps of receiving an incoming signal, performing a phase shift of $180^\circ/N$ and supplying signals with a phase difference.
